

Ecoganix Quality Policy

Our Commitment to Clients & Suppliers

Our unique perspective spans the environmental, agricultural and rural infrastructure. Ecoganix has a proud reputation for integrity and for producing solutions which achieve a sensitive and sustainable balance between the needs of wildlife, the environment and humans.

Our vision is to use this knowledge and independence, supported by our robust, science-based information, advice and implementation services, to help our clients prosper and achieve their aims.

Our business aims are based around appreciating and meeting our client's specific needs (as outlined in the Ecoganix Client Promise), supporting the welfare and wellbeing of our skilled workforce and adopting sound and profitable commercial practices - all brought together in a strong company we are proud to work for.

Our Integrated Management System (EiMS) defines the way that Management wishes the company to operate in compliance with ISO 9001 and other external standards and schemes with the aims of providing value-for-money services which fully satisfy client requirements and deliver profit to the company. All components of the system will be regularly reviewed and revised to meet business need and continually improve performance for the dual benefits of company profitability and client satisfaction.

Staff are required to operate the management system and at all times undertake their duties with technical and commercial integrity.
